Finishes

Finishes are used to improve the **aesthetics** and **durability** of products

Material Type	Finishes Used
Papers and Boards	 Paints Varnishes Laminating Plastic coating Wax coating
Timbers and Boards	 Paints Varnishes Wax and Polish Staining Oil
Metals and Alloys	 Painting Lacquering Electroplating Galvanzing Polishing Plastic Coating Powder Coating
Plastics	 Polishing Painting Decals (stickers)

Standard Components

Standard components are parts or components manufactured in the 1000s+ They are readily available, don't require specialist knowledge or tools to replace them and are universally recognised

Material Type	Components used
Papers and Boards	StaplesClipsSplit pins
Timbers and Boards	 Nails Screws Panel Pins Hinges
Metals and Alloys	 Nuts and bolts Screw Washer
Plastics	Plastic hinges

	Tolerances
•	The total amount a specific dimension or property is permitted to vary This can apply to hole depth, length, angle, thickness, weight and elasticity A gauge can be inserted into a gap or hole to check if the sizes fall within tolerance
If	f parts do not fit within the specified tolerances they are discarded or recycled

Quality Control and Quality Assurance

- QC is *product* oriented Quality control is where products are regularly tested (during and after manufacture) to ensure they meet the defined set of quality criteria
- QA is *process* oriented

Quality assurance is ensuring that the processes used to test the product have been done correctly and consistently You can test a product all you like, but if the tests are wrong/ inconsistent with each other than the results are invalid

Below are examples of Quality Assurance symbols:

Process Orders
